

Report API - CSV response

Clarifruit offers a CSV response API. This is a great baseline integrating with BI tools like Power BI, Tableau, and others.

Here is how the magic happens:

- First to go Admin → Integration → API.

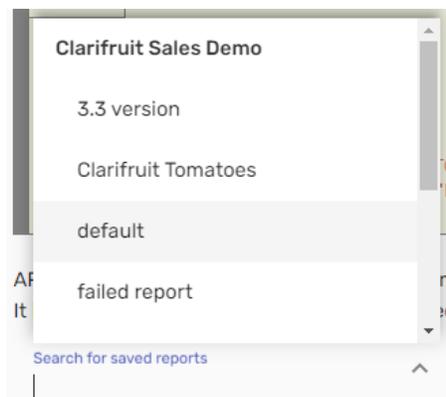

(At the moment this is accessible for Clarifruit only, soon to be exposed to our admins)

- Now, on this page, all you have to do is choose the relevant report from your report list.

If you don't have any saved reports, please go ahead and create your report from the reports tab.

- Now, once choosing the relevant report, the Shell command would get updated automatically with the selected report ID.

Lifecycle Events Mapping **API**

API documentation can be found here: <https://api.clarifruit.com>

Your company Id: 782853

Sample code:

Shell

```
curl --request GET \
--url 'https://public-services.clarifruit.com/api/report?companyId=782853&reportId=64d279afc6150d368220ea98' \
--header 'X-Api-Key: PUT_YOUR_TOKEN_HERE'
```

Python

```
import requests
params = {
    "companyId": "782853"
    "reportId": "64d279afc6150d368220ea98"
}
headers = { "X-Api-Key": "PUT_YOUR_TOKEN_HERE" }
response = requests.request("GET", "https://public-services.clarifruit.com/api/report", headers=headers, params=params)
print(response.text)
```

API - CSV Reports - Please select a report from the list:
It is recommended locking the report you select here, to avoid unintended changes

Search for saved reports

x default x v

- <https://public-services.clarifruit.com/api/report?companyId=782853&reportId=64d279afc6150d368220ea98>

- All you need to do now is copy the curl request and use it in the destination platform.
- Please make sure to use your token, and put it in the right place.
- Here, you need to put your token that belongs to your API user account, provided to you by Clarifruit.

--header 'X-Api-Key: PUT_YOUR_TOKEN_HERE'

- You can test your example with API platforms like Postman, and Insomnia.

With Insomnia it's the easiest, all you need to do is copy the curl from Clarifruit and paste it.

- Copy this curl request:

Now let's see how to connect to Power BI using our example report.

- First, connect to your Power BI Desktop App.
- Click on File → Get Data → Web

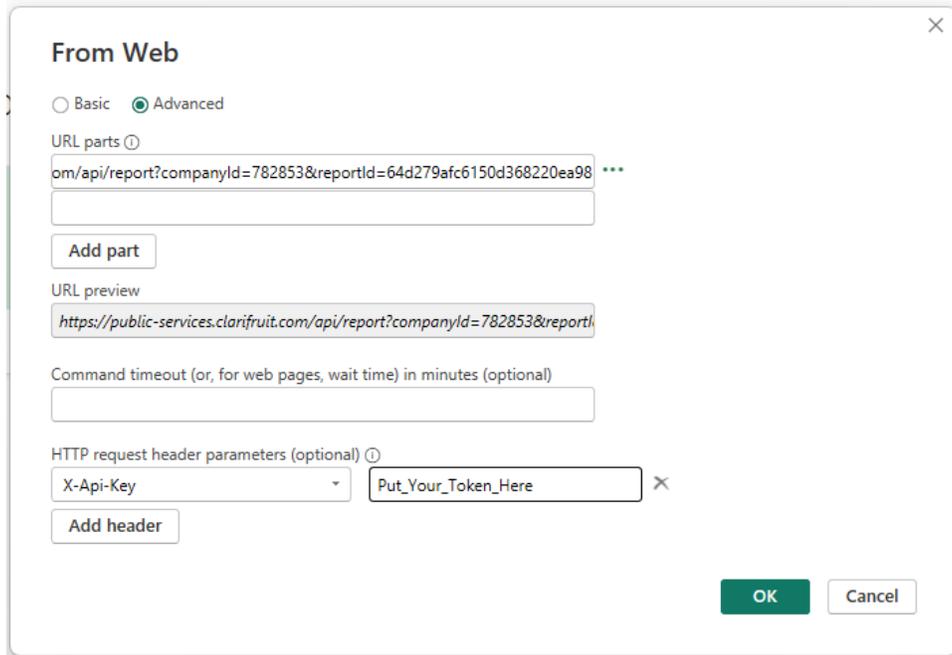

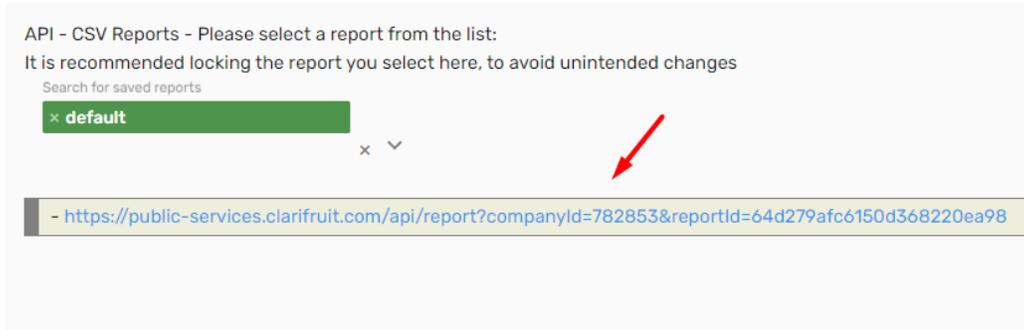

Choose Advanced:

From Web

Basic Advanced

- Now, put the URL of your selected report:

- Add the `X-Api-Key` to your header, and your Token value.
- Click OK.
- As you can see now, the report information now appears in Power BI.

Buttons: Extract Table Using Examples, Load, Transform Data, Cancel

- You can load the information, and start working with it.

The screenshot shows the Power BI interface. On the left is the 'Visualizations' pane with various chart icons. On the right is the 'Data' pane, which is expanded to show a table named 'report?companyId=...'. The table contains the following fields:

- Brix %
- Country of origin
- Customer
- Date of Arrival
- Decay/Rot
- Decay/Rot (Count)
- Grade
- Grower Name
- ID
- Inspection Date
- Inspection Name
- Inspection Time
- Produce
- Produce_1
- QC Report
- Score
- State
- Variety
- Variety_2

- Here is just a simple example of a report you can do using Power BI, and the information from Clarifruit.
 - This report shows BRIX over Produce, from your grower list - you can see who has the best brix results across produce categories.

In addition, the report would show the same filter as you applied to it.

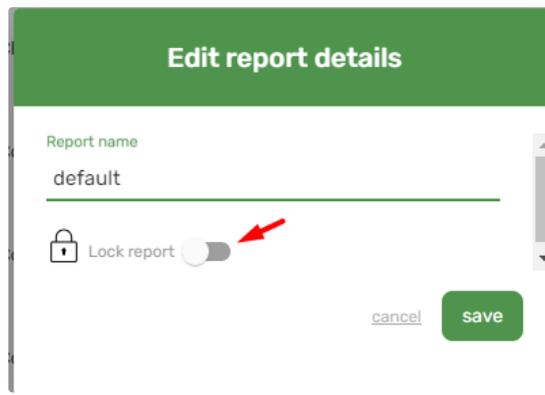

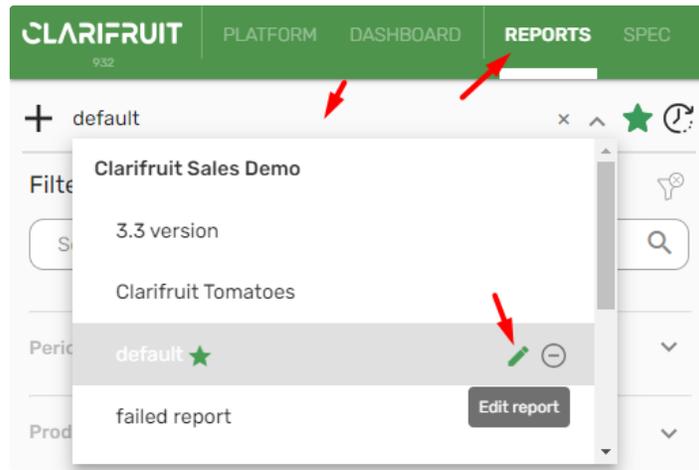

So, if you are planning to request new data every hour, day, or week, please set the correct period filter on your Clarifruit report.

One more recommended action you'd probably want to take is to lock your report.

The report you are using as a base for Power BI, or any other tool, you want to keep it consistent, with no one that could make changes to this report, such as removing or adding columns, changing filters, etc.

By locking the report - you can ensure nobody will change it by mistake, only admins would have access to unlock it, in case of changes that need to be done.

All you need to do in order to lock OR unlock a report, is to choose the report from the Reports tab, click on edit, and then lock/unlock it.

That's it 😊

Now you are ready to use the Clarifruit CSV report and get information automatically to your BI tools.
